

Apertura Enigma mkII \$29,975

The Enigma mkII is the flagship loudspeaker of the French manufacturer Apertura, a nearly 40-year old company. It features two custom-designed, eight-inch cone drivers separated by a ribbon tweeter (22cm) with an aluminum/ polymer sandwich diaphragm for improved damping and linearity. The mid/woofers use woven polypropylene, a new type of composite material. The Enigma mkII has superb bass, with none of the midbass thickness that many speakers exhibit. The result was a beautifully articulated bass with no change in timbre as a pianist moved across the keyboard. The treble has lots of extension and with no brightness, and dynamic speed is outstanding. The bottom end is satisfying, but not the last word in low-frequency extension.
